

It's Federal Law!

All providers must give patients current Vaccine Information Statements (VISs)!

2009 H1N1 INFLUENZA VACCINE
INACTIVATED WHAT YOU NEED TO KNOW

Many Vaccine Information Statements are available in Spanish and other languages. See www.immunize.org/vi.

1 What is 2009 H1N1 influenza?

2009 H1N1 influenza (which was earlier called Swine Flu) is a type of flu caused by a new strain of influenza virus. Because it has spread to many countries, it has been declared a pandemic influenza strain.

Like other flu viruses, 2009 H1N1 spreads from person to person through coughing, sneezing, nasal secretions, and sometimes through handling objects contaminated with the virus.

Signs of 2009 H1N1 can include:

- Fatigue
- Fever
- Sore Throat
- Muscle Aches
- Chills
- Coughing
- Sneezing

Some people also have diarrhea and vomiting.

Most people recover within a week. But some people get pneumonia or other serious illnesses. Some people have to be hospitalized and some die.

2 How is 2009 H1N1 different from regular (seasonal) flu?

Seasonal flu viruses change from year to year, but they are closely related to each other. People who have had prior flu infections usually have some immunity to seasonal flu viruses.

The 2009 H1N1 flu virus is a new virus strain. It is very different from seasonal flu viruses.

Most people have little or no immunity to 2009 H1N1 flu.

3 2009 H1N1 influenza vaccine

Vaccines are being made to protect against 2009 H1N1 influenza.

- These vaccines are produced just like seasonal flu vaccines.
- They are expected to be as effective as seasonal flu vaccines.

4 Who should get 2009 H1N1 influenza vaccine and when?

WHO

Groups recommended to receive 2009 H1N1 vaccine first are:

- Pregnant women
- People who live with or care for infants younger than 6 months of age
- Health care and emergency personnel
- Anyone from 6 months through 24 years of age
- Anyone from 25 through 64 with certain chronic medical conditions or a weakened immune system

These groups should also be vaccinated:

- Healthy 25-64 year olds
- Adults 65 and older

WHEN

Get vaccinated as soon as the vaccine is available. Recommendations may change if we learn that other groups of people are at particularly high risk. Some people may need **two doses** of vaccine.

2009 H1N1 INFLUENZA VACCINE
LIVE, INTRANASAL WHAT YOU NEED TO KNOW
