Check out the new 30 minute video!

Now that the use of digital data loggers (DDLs) are required for all California VFC providers, we wanted to share a new video to assist your practice in meeting the new VFC Program requirement. The on-demand video is designed for both VFC providers that have no experience with DDLs, as well as those that have already implemented the use of DDLs in their practice.

You’ll learn about:

- Digital data loggers (DDLs) and how to meet the new VFC Program requirement
- Tips for identifying different types of digital data loggers
- Addressing out-of-range temperatures

Webinar coming soon!

In addition to the video, the VFC Program will host a webinar in February 2018 to review highlights from the video and answer any questions you may have about implementing digital data loggers in your practice. An invitation to the webinar will be sent to you soon.
