### Immunization Timing 2018

#### Age
- **Birth**
  - **HepB**

#### Age 2 months
- **DTaP** (Diphtheria, Tetanus, Pertussis)
- **Polio (IPV)**
- **HepB** (age: 1-2 months)
- **Hib** (Hib meningitis)
- **PCV** (Pneumo)
- **RV**

#### Age 4 months
- **DTaP**
- **Polio**
- **HepB**
- **Hib**
- **PCV**
- **RV**

#### Age 6 months
- **DTaP**
- **Polio** (age: 6-18 months)
- **HepB**
- **Hib**
- **PCV**

#### Age 12 months
- **HepA** (age: 12-23 months)
- **MMR**
- **Varicella**
- **Hib**

#### Age 15 months
- **DTaP**
- **Polio** (IPV)
- **MMR**
- **Varicella**

#### Age 18 months
- **HepA**

---

**This is a suggested schedule. For alternatives and details, including additional recommendations for high-risk children, consult the Recommended Immunization Schedule for Children and Adolescents Aged 18 Years or Younger, UNITED STATES, 2018.**

1. Monovalent HepB vaccine is recommended within 24 hours of birth for stable infants weighing >2 kg. For others, see schedule.
2. A dose of HepB vaccine is not necessary at 4 months if doses are given at birth and 2 months but may be included as part of a combination vaccine. The final dose (3rd/4th) should be given after age 24 wks. and at least 16 wks. after 1st dose.
3. Administer first dose at age 6 wks-14 wks. (Max. age: 14 wks., 6 days). Max. age for final dose in the series: 8 months, 0 days.
4. This 6 month Hib dose is not indicated if PedvaxHIB® is used exclusively for the 2 and 4 month infant doses.
5. Minimum intervals: Ages 1-12 year: 3 months. Ages 13 years and older: 4 weeks.
6. Two MMR doses should still be given on or after 12 months of age.
7. Final dose of PCV series should be given at ≥12 months of age or after.
8. The 4th dose of DTaP may be administered as early as 12 months, provided at least 6 months have elapsed since the 3rd DTaP dose.
9. HPV vaccine should be given on a 0, 6-12 month schedule for 9-14 year olds (min. interval is 5 months). If patient is immunocompromised or initiates series at 15 years or older, use a 3 dose schedule (0, 1, 2, 6 months).
10. A MenB vaccine series may be given to all persons 16 through 23 years of age. See MMWR for details.
