

**TO:** EZIZ

**FROM:** CDPH

**SUBJECT:** April 10<sup>th</sup> AHEC Webinar: Preventing HPV Cancers through Health Systems

**DATE:** 4/19/19

---

Dear EZIZ Users,

We are sharing a message about an upcoming webinar featuring 3 regional health systems discussing lessons learned from engaging in an HPV immunization quality improvement initiative with the American Cancer Society.

## National AHEC Organization HPV Immunization Project

April 10th at 9:30 am PT, the **National AHEC Organization** is hosting a 60-minute webinar showcasing lessons learned from 3 health systems in the midst of a year-long quality improvement initiative.

[Register here.](#)

Last year, the **American Cancer Society** launched a pilot partnership with regional health systems to increase HPV vaccination rates for cancer prevention. Using the [Large Health Systems Action Guide](#), these health systems built out new strategies based on the existing evidence base.

Tune in to hear from clinicians and quality improvement leaders on why their systems prioritized HPV vaccination, what goals they set, and key lessons learned as they approach the halfway mark of the pilot initiative.

Speakers include:

- [Brian Birch](#), MD, St. Luke's (Idaho)
- [Heidi Warpinski](#) MS, RN, CPNP, Executive Director, Prevea Health/HSHS St. Vincent's Hospital (Wisconsin)
- [Tim McCoy](#), DO, MercyOne (Iowa)

After completing this webinar, participants should be better able to:

1. Access and deploy the Clinician and Systems Action Guides as evidence-based tools for quality improvement initiatives;
2. Explain at least three reasons for why a health system would prioritize HPV cancer prevention;
3. Cite at least three lessons learned from presenting systems.

*Continuing Education credits are pending for nurses.*
