For Healthcare Professionals:

- [Child and Adolescent Immunization Schedule, ages 18 years or younger](#)
- [Adult Immunization Schedule, ages 19 years or older](#)
- [Schedule Changes and Guidance](#)
- [NEW! FAQs on ACIP Shared Clinical Decision-Making Recommendations](#)

For Parents and Adult Patients:

- [Parent-Friendly Schedule, Infants and Young Children \(birth-6 years\)](#)
- [Parent-Friendly Schedule, Preteens and Teens \(7 years-18 years\)](#)
- [Resources for Parents](#)
- [Resources for Adult Patients](#)

Key Updates - Child/Adolescent Schedule:

- Those 2-18 years of age who have not previously received Hep A vaccine should receive catch-up vaccination and complete a 2-dose series.
- Either Td or Tdap is an option for catch-up series doses in persons who have previously received Tdap.
- A dose of Tdap or DTaP administered at 10 years now counts as the adolescent Tdap booster.

Key Updates - Adult Schedule:

- [HPV vaccination](#) recommended for all persons through age 26 years.
- [Td or Tdap may now be used](#) in situations where only Td vaccine have been indicated for the decennial tetanus, diphtheria, and pertussis booster vaccination, tetanus prophylaxis for wound management, and catch-up vaccination.
- **Shared clinical decision-making approach** recommended for immunization of
 - [Persons 27-45 years with HPV](#)
 - [Young adults through age 23 with MenB](#)
