# Vaccine Tips

---

November 30, 2011

**Vaccines won't work if they're not stored at the right temperatures!**

**Check the temperature in your vaccine fridge and freezer every morning and at the end of the day.**

**Use a second (back-up) thermometer to make sure your primary thermometer is working.**

**Replace thermometer batteries when you change the clocks, e.g. every fall and every spring.**

**Complete VFC's newest lessons: Monitoring Refrigerator and Freezer Temperatures. Your clinic may be eligible to receive a free VFC certified thermometer upon lesson completion.**

**Visit [www.EZIZ.org](http://www.EZIZ.org) for temperature monitoring information and job aids!**
