

For Providers

California COVID-19 Vaccination Program Update

myCAvax Release 23 Delay

A new feature of Release 23 was slated to populate Vaccine Finder data into the Vaccine Order Screen. We recently discovered that Pfizer Tris-sucrose (12+ years, Gray Cap) inventory is unavailable in the information we receive from CDC. The data set from CDC currently aggregates the "Pfizer adult vaccine products" under a single code. To avoid confusion with incorrect inventory showing in that field, the release has been postponed until we can work with CDC to get inventory information specific to the Pfizer Tris-sucrose (12+ years, Gray Cap) product. Please stay tuned for updates on when this release will be re-scheduled.

Please note: Select Providers with early access to the new Vaccine Order screen may notice this information is not populating in the current interface. Please continue to place orders for this product. The absence of information in this field will not delay the review and approval of your orders.

Providers, please continue to report your inventory to VaccineFinder once a day. For more information on how to input data into VaccineFinder, view the [Reporting Inventory to Vaccine Finder job aid](#) or contact the VaccineFinder Help Desk at vaccinefinder@castlighthealth.com or call 855-886-4317
