Your baby may be at risk for COVID-19, flu and whooping cough

COVID-19 and flu can be dangerous for you and your baby, causing:

- Low birthweight
- Premature birth
- Stillbirth
- Hospitalization
- Death

Whooping cough can also be dangerous for babies, causing:

- Coughing fits
- Gasping for air
- Serious lung infections
- Hospitalization
- Death

If you’re pregnant, get:

- Flu vaccine and COVID vaccine and booster(s) as soon as possible and
- Whooping cough (Tdap) vaccine in your third trimester of every pregnancy

The protection you get from these vaccines passes to your baby during pregnancy. Your baby counts on you for protection.
