

It's Preteen Vaccine Week!

By making sure preteens are up-to-date on important immunizations, parents can protect children from dangerous diseases. Help remind parents about the immunizations needed at the preteen doctor visit, including:

- Pertussis
- Human Papillomavirus (HPV)
- Meningococcal
- Influenza

Participate in Preteen Vaccine Week by posting to your clinic's social media pages using these [suggested social media messages](#), or by placing a [web banner](#) on your clinic's website. You can also follow the campaign on social media at #PreteenVaxCA and like or share posts that way.

Please utilize every opportunity, including sports physicals, to provide immunizations to preteens.
