

Please join us in celebrating National Infant Immunization Week (NIIW), April 24-May 4, 2021 and Toddler Immunization Month (TIM) in May. We observe NIIW/TIM to promote the importance of protecting infants from vaccine-preventable diseases and fully vaccinating children ages two years and younger.

This year's observance is particularly important as many children have [missed their recommended vaccines due to the COVID-19 pandemic](#) and are vulnerable to vaccine-preventable diseases. Providers play a critical role in protecting children from vaccine-preventable diseases by making sure they are vaccinated on time. Bring your pediatric patients up to date now before COVID-19 vaccination becomes available to them. [Let families know](#) what extra precautions you are taking to keep them safe during their vaccine appointments. As a reminder, current CDC guidance states that COVID-19 vaccines cannot be co-administered with other vaccines.

To share the importance of infant immunization during National Infant Immunization Week, CDC has also provided [customizable social media messages](#) that can be utilized during NIIW.

Visit CDC's [NIIW digital toolkit](#) for more resources.

Thank you for protecting our children against vaccine-preventable diseases!
