Vaccine Tips
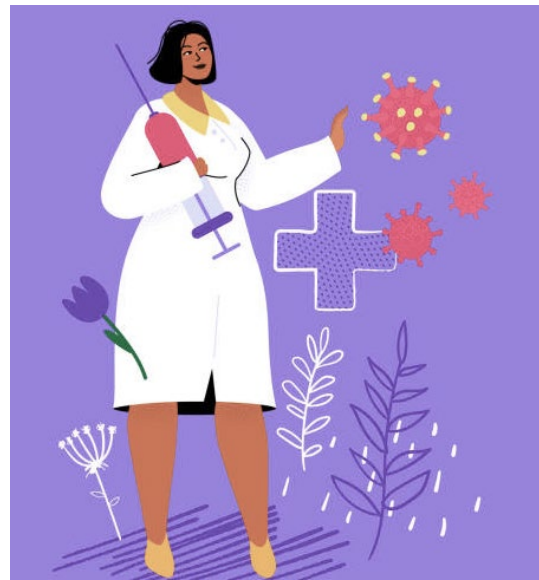

Ensure patient safety and proper reporting of immunization administration errors and adverse events!

- **After a vaccine has been administered, report any adverse vaccine events (e.g., negative reactions or serious side effects) to [Vaccine Adverse Effects Reporting System](#) (VAERS).**

- **For any preventable vaccine administration errors (e.g., wrong administration site or incorrect or expired dose), report to [Vaccine Error Reporting Program](#) (VERP).**

- **Report nirsevimab (Beyfortus) adverse events and immunization errors to the FDA using [MedWatch](#).**

- **Review this [job aid](#) for details on when to use VAERS, VERP, and MedWatch.**
