Continue Protecting Young Patients from RSV!

Keep administering nirsevimab (Beyfortus) until March 31st

- Infants are recommended to receive nirsevimab (Beyfortus) to protect against RSV until the end of this month.
 - **Got unused, non-expiring doses of nirsevimab? Do NOT send them back.** Store and put “Keep for Fall” label on them to keep for fall and administer during the next RSV season.
 - More info at [EZIZ’s RSV Immunization page](#).

Also, don’t forget to vaccinate against measles!

- Measles cases are increasing nationwide, with California’s cases linked to international travel. Ensure your patients are protected with two MMR doses, especially before travel!
- MMR vaccine may be used as young as 6 months of age in an outbreak or prior to international travel.
- For more info on measles and MMR vaccine see CDPH’s [EZIZ Measles Resources page](#).

Thank you for all you do to protect VFC patients!
