Dear EZIZ Users:

It’s Week 2 of National Immunization Awareness Month (NIAM)!

This week, we highlight the theme, *Pregnant Women—Protect Yourself and Pass Protection on to Your Baby*.

The California Department of Public recently sent out a press release warning the public about the dangers of pertussis to infants and how Tdap vaccination during the third trimester of pregnancy can pass immunity to newborns. Share these resources below from the CDPH, Immunization Branch and the Centers for Disease Control and Prevention (CDC) to help vaccinate pregnant women with Tdap.

Also, don’t forget that influenza season is just around the corner. Pregnant women should receive inactivated flu vaccine any time during their pregnancy to protect themselves and their newborns against influenza disease as soon as seasonal flu vaccine is available.

**Tdap and Flu Vaccine Handouts for patients**

Flu and Whooping Cough poster for Pregnant Women | Spanish | Chinese

Expecting? Protect Yourself and Your Baby Against Flu and Whooping Cough flyer | Spanish | Chinese

Immunizations for a Healthy Pregnancy brochure | Spanish | Chinese

Pregnant Women Need a Flu Shot | Spanish
