Patient materials now available

October 16, 2017

Dear VFA Providers,

To help you educate your adult patients about needed vaccines, order these materials at the [VFC store](#):

- [You May be at High-risk for Pneumonia](#) flyer (double-sided English and [Spanish](#)). This flyer can help reinforce your strong recommendation to patients with chronic conditions needing pneumococcal vaccine(s). Consider posting in areas where patient vitals are taken (e.g., next to the scale, in exam rooms, etc.).
- [Vaccines: Know What You Need](#) (CDC). Use this flyer to discuss needed vaccines during patient visits.

Other great resources NOT currently available in print include:

- [Top 10 Strategies to Increase Adult Immunization Rates](#). Review and discuss implementation of these ten evidence-based strategies to improve adult immunization coverage with providers and staff at your organization.
- The [Need a Ride?](#) poster helps promote the new Medi-Cal transportation benefit. As of July 1, 2017, all Medi-Cal members are eligible to receive free transportation to medically-necessary services, including immunization services at a doctor's office or pharmacy. See the [All Plan Letter](#) for more details.

Visit the [California VFA Resources](#) webpage for more information.
